Additional Tasks

Additional Tasks

- Start working on the following Tasks after you finish the previous ones (Create separate .py files so these tasks don't affect each other)
- Additional Tasks:
 - Adding Checkpoints
 - Changing Environment
 - Compare Different Algorithms

Adding a Checkpoint (Waypoint)

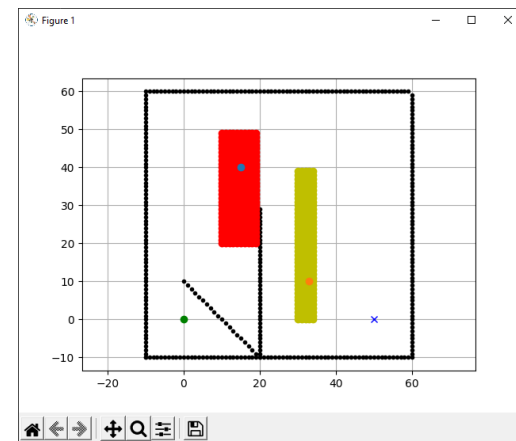

- Assume the Aircraft is a supply craft that must reach 2 drop-off points to drop supplies before heading back to base
1. Add 2 checkpoints:
 - One per each heavy consumption area
 2. Reach all checkpoints before arriving at the destination

Adding a Checkpoint

- Requirements:

1. This is an add-on for the code you are currently working on
2. Checkpoints should be generated inside the heavy consumption areas
3. Print the checkpoints, planning and the final path correctly **with different appearance**

Changing Environment

- ***Continue this task using the previous task's code**
- We have been working on the same set of obstacles
- However, Path Planning should be able to work with different obstacle sets
- **A new scenario** per execution

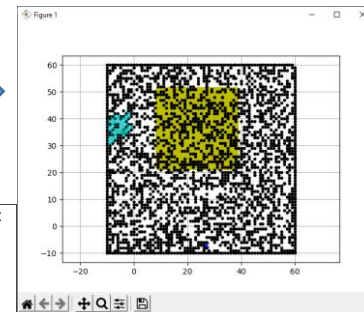

Changing Environment

- Modify the code so that:

1. Only the fuel-consuming area remains and generate it randomly **with a fixed area (30x30)**
2. Diagonal movement is **disabled**, change parameter(s) so that the object could travel **within one grid size**
3. Obstacles are generated randomly with **reasonable density**
4. Destination and starting points are generated randomly with **at least a 50-unit distance in-between**
5. Diagonal movements are **disabled**
6. Plotting of the fuel-consuming area would not cover the obstacles, and obstacles **should not generate** at/near the start and end point

Density too high

Reasonable

Density too low

Comparing Algorithms

1. Choose 2 more algorithms from the AStar GitHub repository
2. Modify the code so all 3 algorithms are working with the **same obstacle set**
3. Try and compare the algorithms and produce a conclusion
