Additional Tasks

Additional Tasks

- Start working on the following Tasks after you finish the previous ones (Create separate .py files so these tasks don't affect each other)
- Additional Tasks:
 - Adding Checkpoints
 - Changing Environment
 - Compare Different Algorithms
 - XXX

Adding a Checkpoint (Waypoint)

- Assume the Aircraft is a supply craft that must reach 2 drop-off points to drop supplies before heading back to base
- 1. Add 2 checkpoints:
 - One per each heavy consumption area
- 2. Reach all checkpoints before arriving at the destination

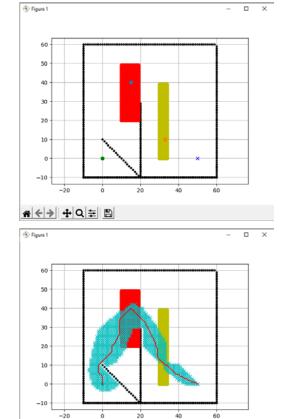

Adding a Checkpoint

- Requirements:
 - 1. This is an add-on for the code you are currently working on
 - 2. Checkpoints should be generated inside the heavy consumption areas
 - 3. Print the checkpoints, planning and the final path correctly with different appearance

Changing Environment

- *Continue this task using the previous task's code
- We have been working on the same set of obstacles
- However, Path Planning should be able to work with different obstacle sets
- A **new scenario** per execution

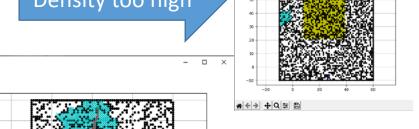

Changing Environment

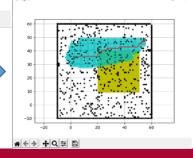

- Modify the code so that:
 - Only the fuel-consuming area remains and generate it randomly with a fixed area (30x30)
 - 2. Diagonal movement is **disabled**, change parameter(s) so that the object could travel **within one grid size**
 - 3. Obstacles are generated randomly with reasonable density
 - Destination and starting points are generated randomly with at least a 50unit distance in-between
 - 5. Diagonal movements are disabled
 - 6. Plotting of the fuel-consuming area would not cover the obstacles, and obstacles should not generate at/near the start and end point

Reasonable

Density too low

Comparing Algorithms

- 1. Choose 2 more algorithms from the AStar GitHub repository
- 2. Modify the code so all 3 algorithms are working with the same obstacle set
- 3. Try and compare the algorithms and produce a conclusion
